

New England Synchro-phasor Applications

- Application priorities:
 - Event identification and analysis
 - Data management (events, synchrophasor data, etc.)
 - Visualization: time trending, correlation, analysis...
- Application strategy:
 - Work with vendors to develop new applications and adapt their existing applications to ISO-NE needs.
 - In-house application development limited; rely on vendors past success with vendor support makes in-house support unnecessary.
- Application deployment roadmap:
 - Engineering use during SGIG
 - Evaluate deployment in control room after SGIG
