

# Looking Back: **A 10 Year Retrospective on Synchrophasor Technology at Dominion Energy**

**David Roop**

*Director, Electric Transmission Operations & Reliability*

**Thanks for Choosing Richmond!**

# Looking Back over the Last 10 Years

**2009** – Kicked off synchrophasor initiative; DOE SGIG kickoff;

**2012** – Began standardized relay/PMU sensor deployment

**2013** – DOE SGIG Demonstration  
*Linear State Estimator v1.0 released as OSS*

**2014** – CERTS Synchrophasor Data Conditioning and Validation Project

**2015** – DOE FOA970 Kickoff

**2017** – DOE FOA970 Demonstration  
*Linear State Estimator v2.0*

**2017** – DFR PMU Conversion begins  
*Total transmission system coverage*

**2019** – Scaling towards Sustainability  
High Performance Analytics Sandbox for Use Case Development

# SGIG Demonstration Project

## Three Phase Linear State Estimator & It's Applications

### Overview

- Installation of PMUs
- Development of WAMS
- Application Development & Testing
- Linear State Estimation
- CTPT Calibration
- Islanding Detection
- Imbalance Monitoring
- Real-time Visualization Applications

# SGIG Demonstration Project

## Three Phase Linear State Estimator & It's Applications

### Deployment of 80 PMUs to the Dominion Energy 500kV Network

- 500kV Substations = **21**  
(70% of total)
- 500kV Transmission Lines = **35**  
(75% of total)
- 500kV Transformers = **28**  
(20% of total)
- 500kV Circuit Breakers = **110**  
(85% of total)
- 230kV Transmission Lines = **12**  
(5% of total)

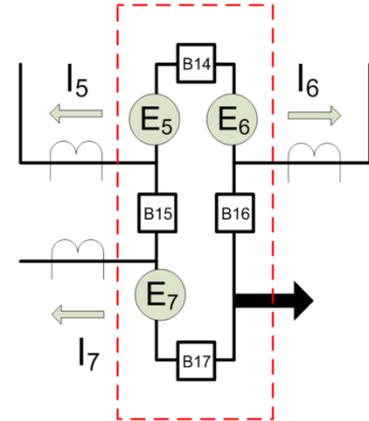

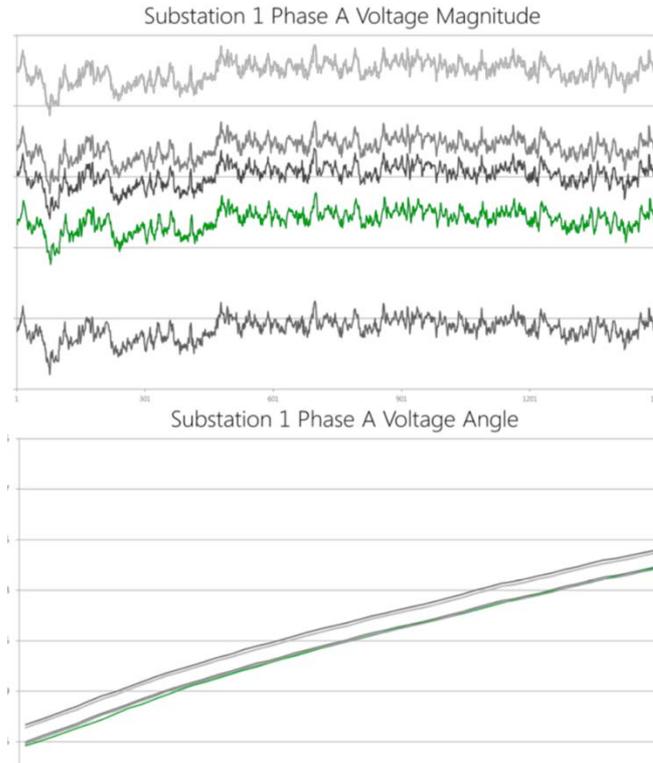

# SGIG Demonstration Project

## Three Phase Linear State Estimator & It's Applications

### Created the first three phase linear state estimator

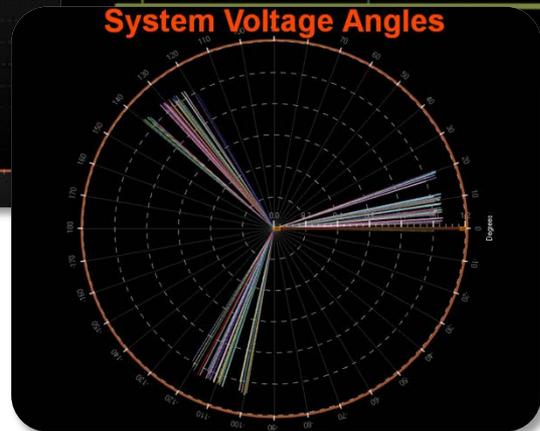

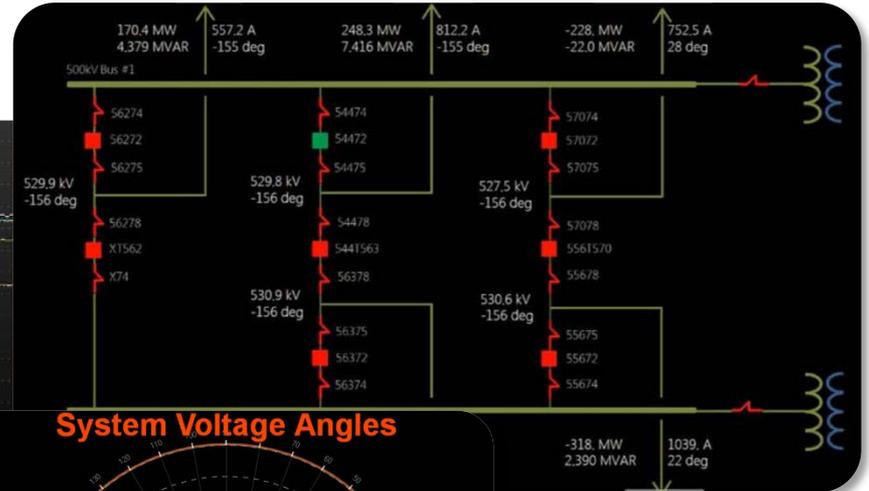

- Demonstrated at Dominion Energy in 2012 and 2013
  - 80 PMUs w/ over 600 phasor quantities
  - Network Model contains:
    - 107 Circuit Breakers
    - 216 Switches
    - 329 Nodes
    - 28 Substations
    - 30 Transmission Lines
- Fully integrated topology processor
- LSE v1 released open source
- LSE v1 commercialized by vendors

# SGIG Demonstration Project

## Three Phase Linear State Estimator & It's Applications

### Real Time Visualization

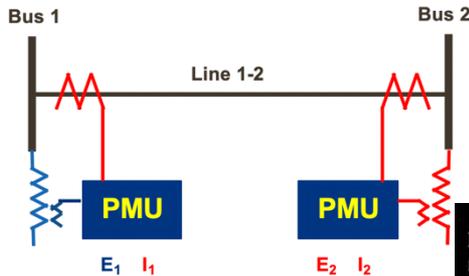

# SGIG Demonstration Project

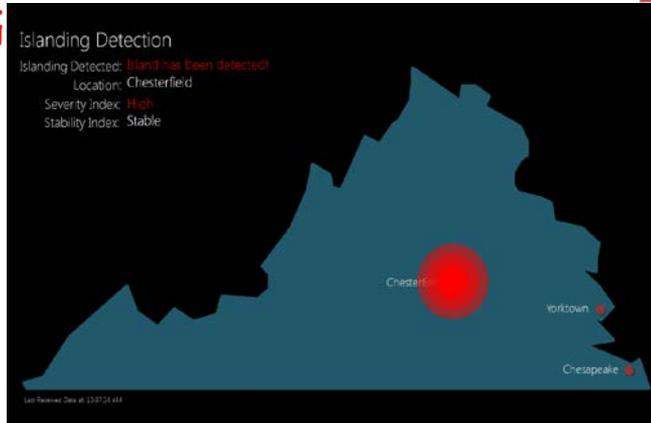

## Three Phase Linear State Estimator & It's Applications

### Network Applications

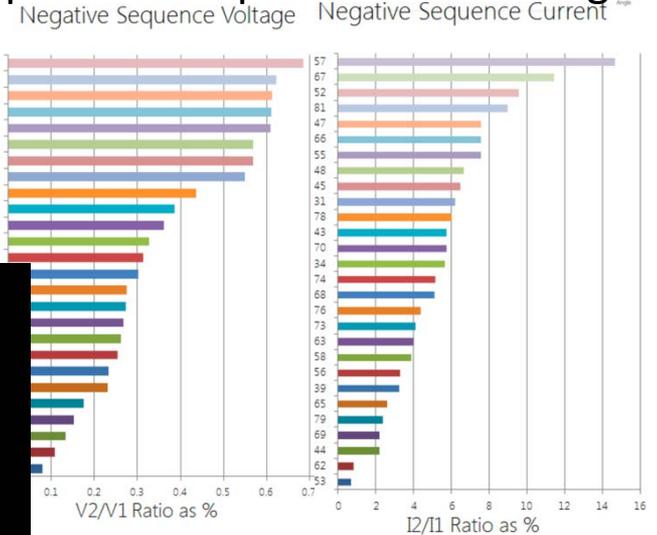

#### Instrument Transformer Calibration

#### Islanding Detection

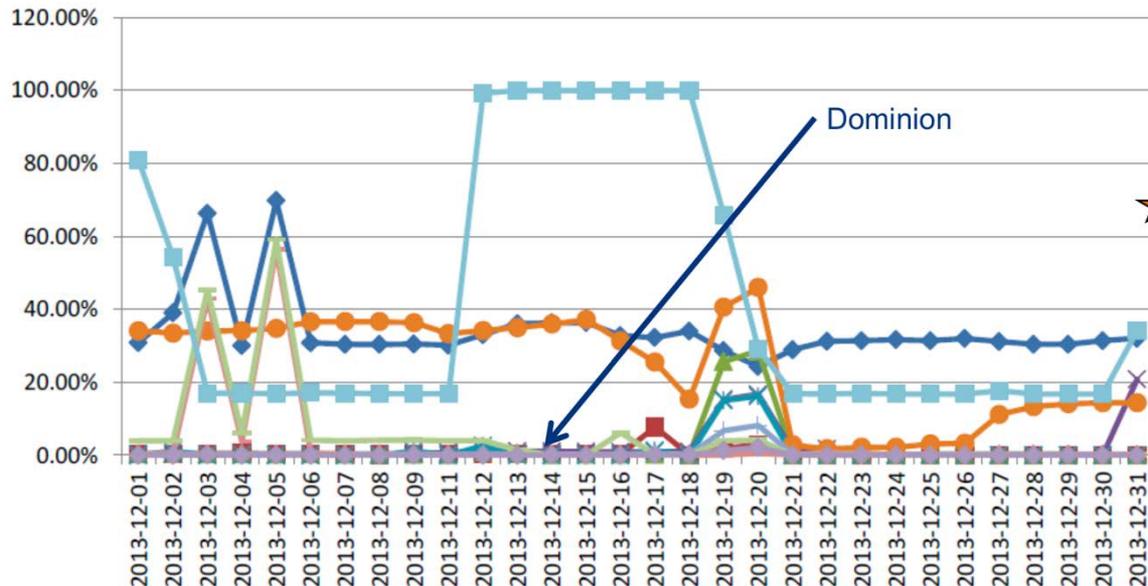

#### Sequence Component Monitoring

# Streaming Synchronphasor Data to PJM

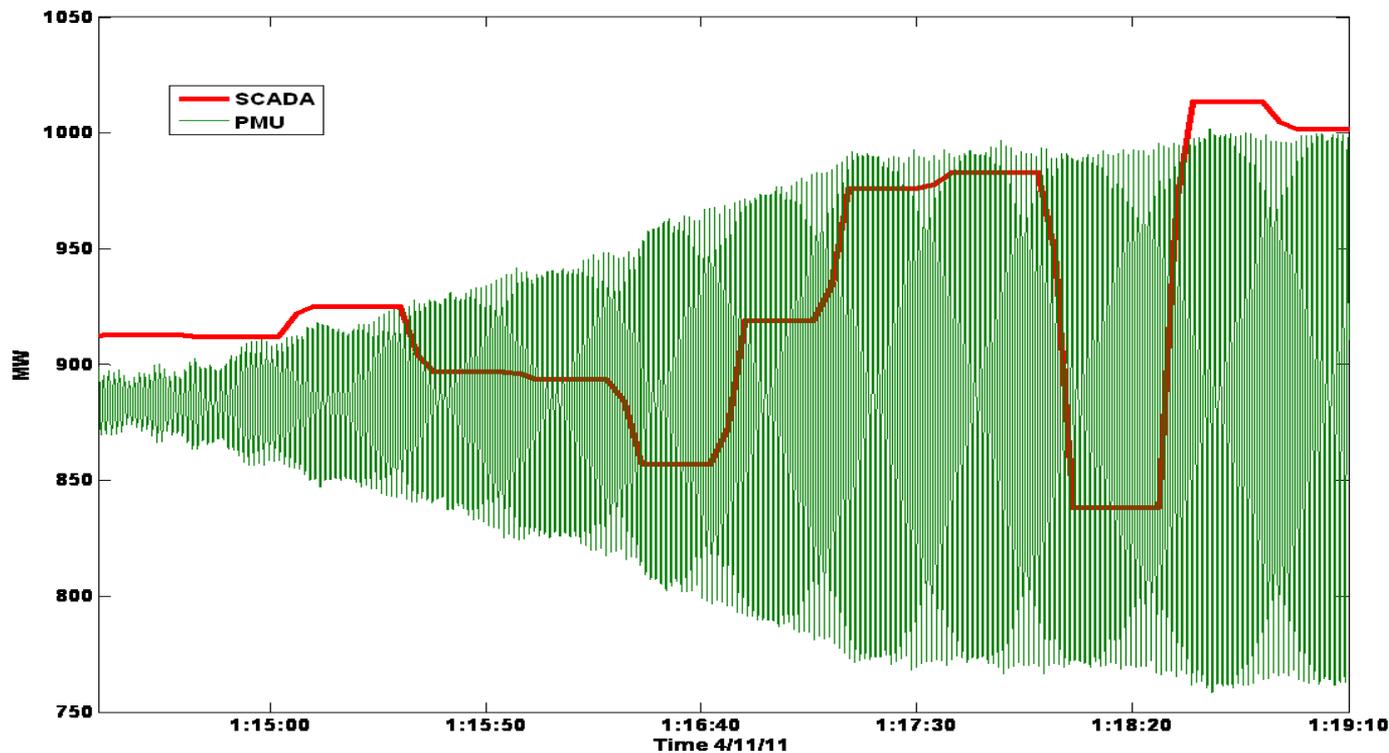

- Sharing data with PJM
- Top performing data quality in 2013
- Developed custom automation for naming translation & phase angle rotation - released open source

Daily Average PMU Error by TO, December 2013

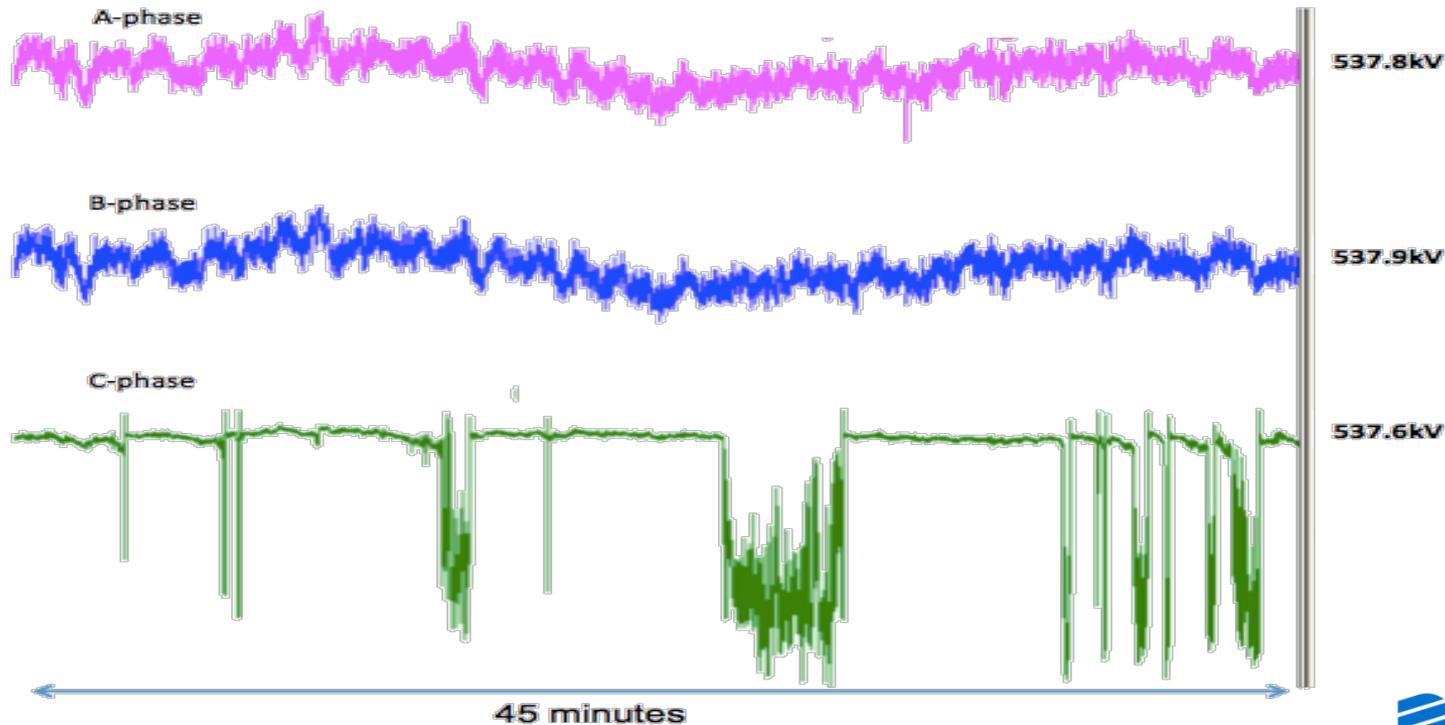

# Some Early Wins

## Oscillations

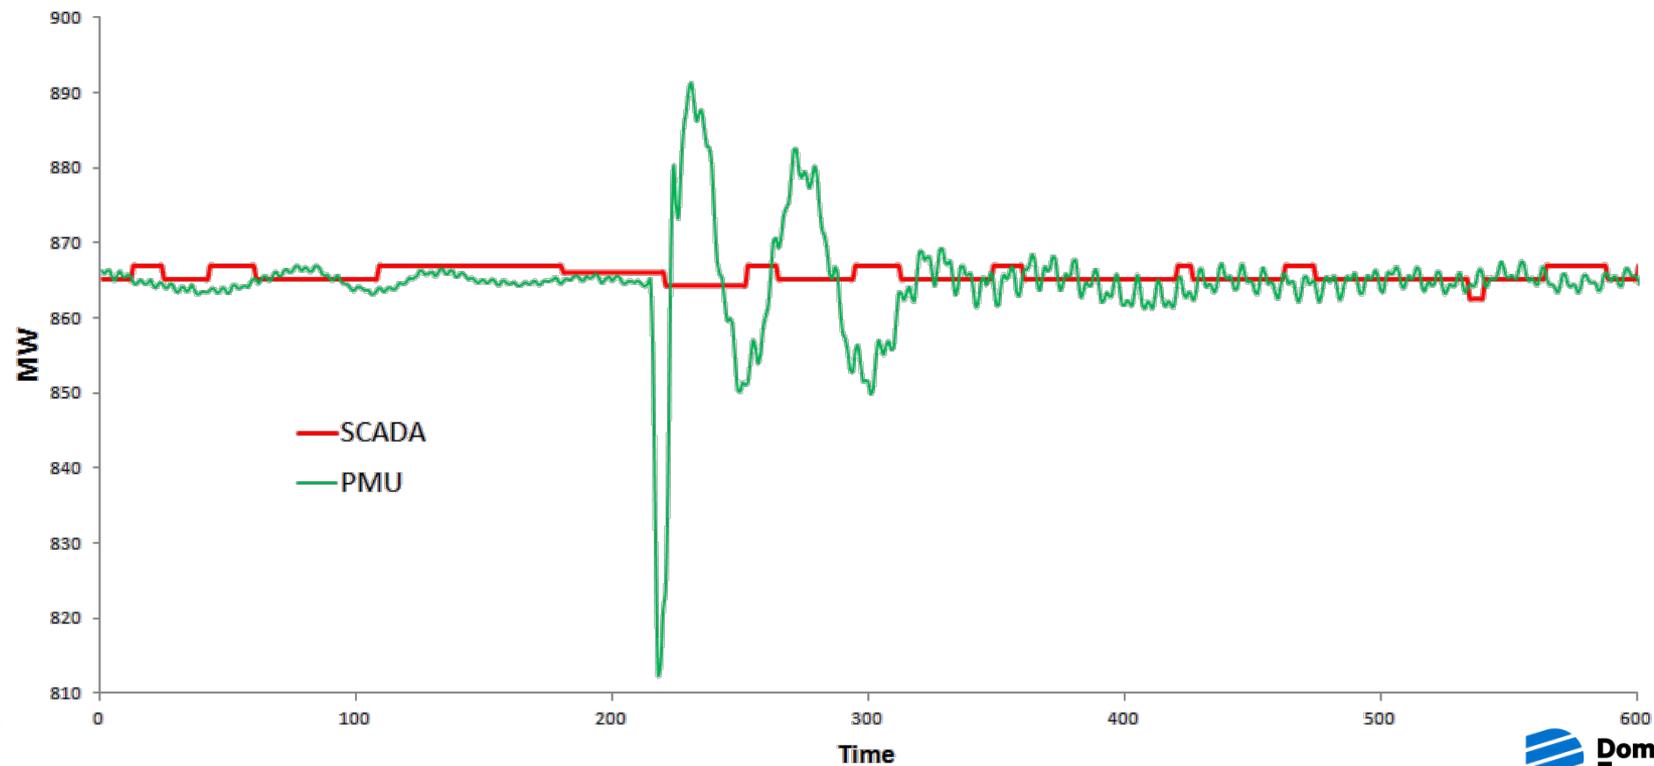

# Some Early Wins

## Instrument Transformer Failure

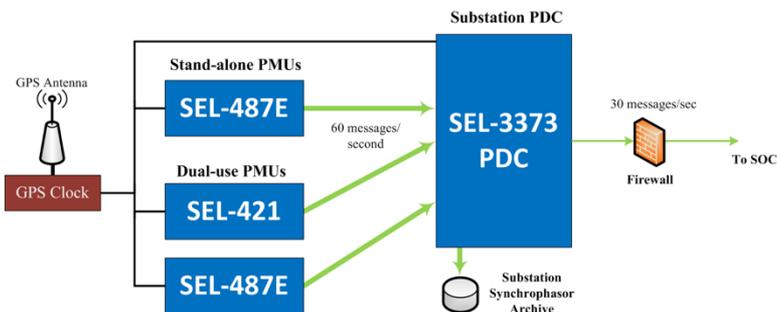

# Some Early Wins

## Looking at Faults

# Standardization of PMU & PDC Deployment

- PMU & PDC deployment was standardized in substations where new construction took place.

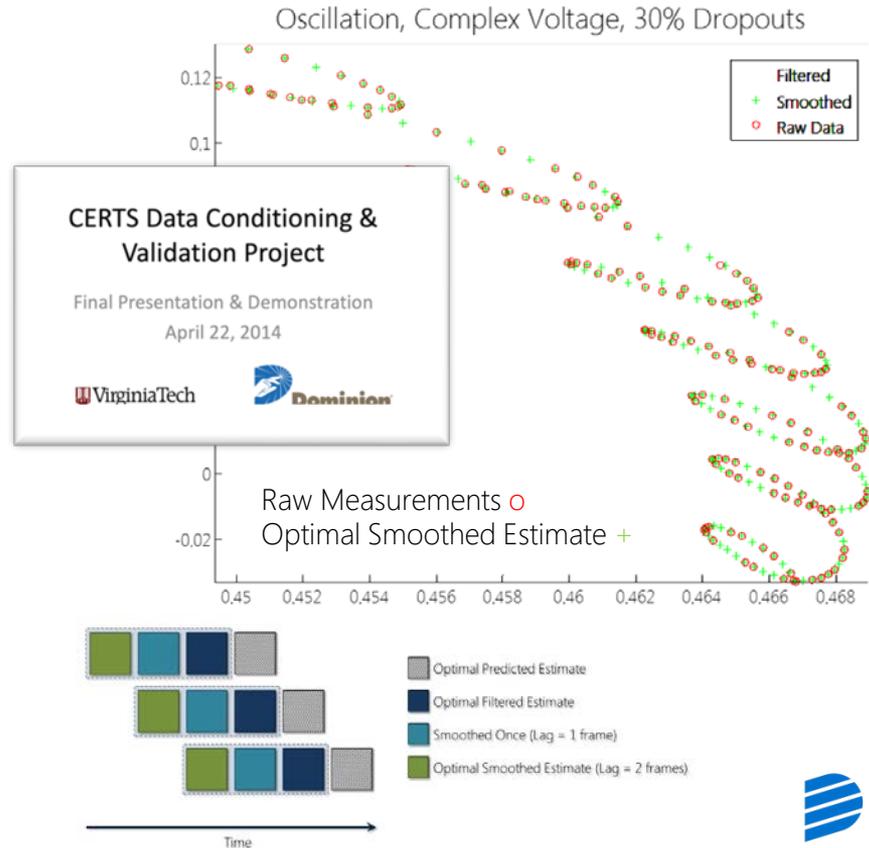

- This created an automatic mechanism for growing the number of PMU measurements

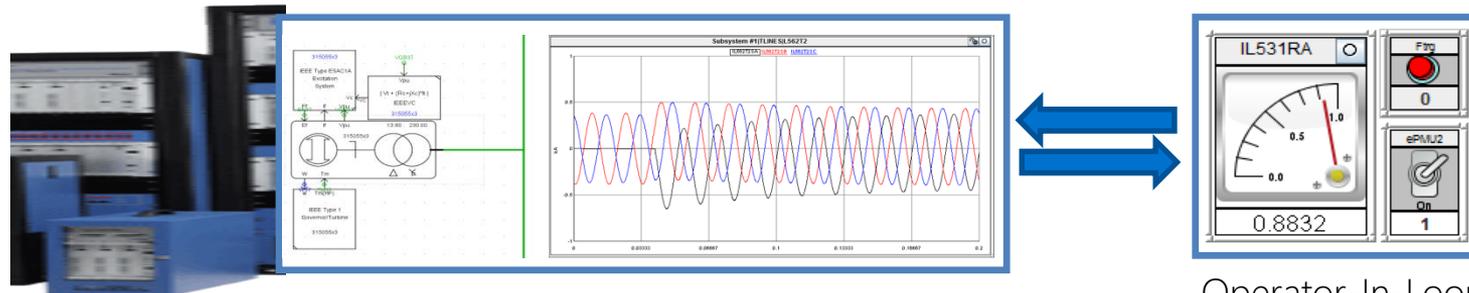

2019 Totals	Average Per Relay-PMU	Relay-PMU EOY 2019 Total
Frequency	1	600
DFDT	1	600
Status	1	600
Voltage Magnitude	5	3,000
Voltage Angle	5	3,000
Current Magnitude	6	3,600
Current Angle	6	3,600
Digital	1	600
Analog	0	0
<b>Totals</b>	<b>26</b>	<b>15,600</b>

# CERTS Data Conditioning & Validation Project

- Collaboration with Dominion, Virginia Tech, and LBNL
- Improved LSE Technology
- Created real-time active data conditioning
- Released open source

# Operator Training Simulator for PMU Visualization

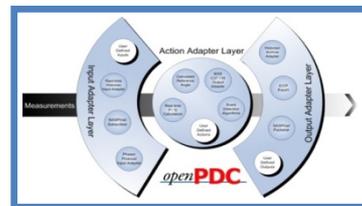

Electromechanical & Electromagnetic Dynamics

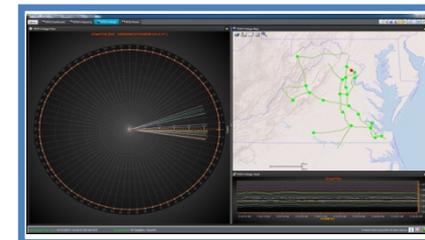

Operator-In-Loop Runtime Controls

Closed-Loop Relay/PMU Interface

Virtual PMUs Streaming Data

Visualization Software

# Relay Technician Training Courses

- Dominion has a world class Relay Tech Program
- Relay Tech's commission all Dominion PMUs
- Step 6 course teaches:
  - *PMU fundamentals*
  - *Why PMUs matter to Dominion*

## What are Synchrophasors and PMUs?

### Synchrophasor

- Synchronized Phasor Measurement

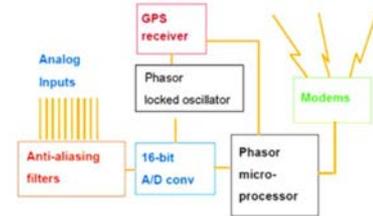

### PMU

- Phasor Measurement Unit

## How Does a PMU Work?

### Time Synchronization

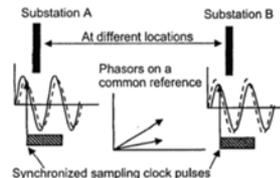

A Phasor Measurement Unit (PMU)  
is just a meter...

Like a multimeter is to voltage,  
current, resistance, etc...  
a PMU is to a **phasor**.

## How Does a PMU Work?

### Time Synchronization

# DOE FOA970 openECA

T&D Consulting Engineers

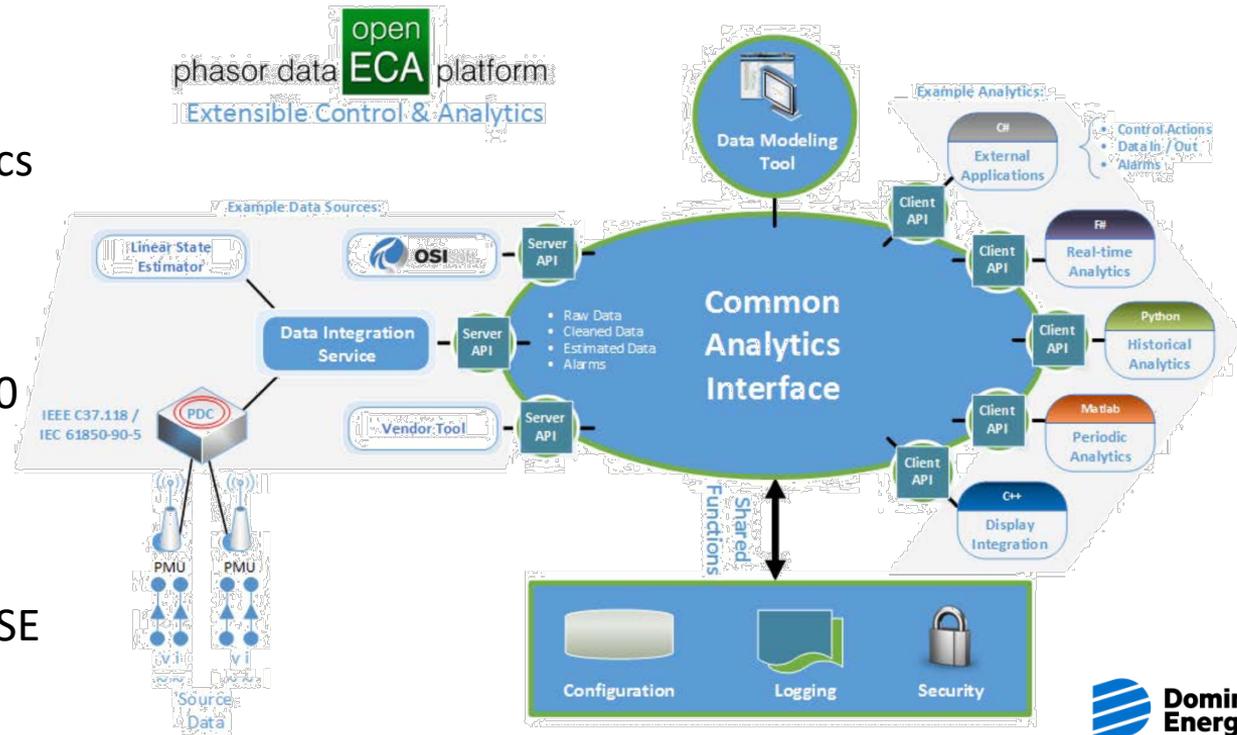

Dominion

GRID PROTECTION ALLIANCE

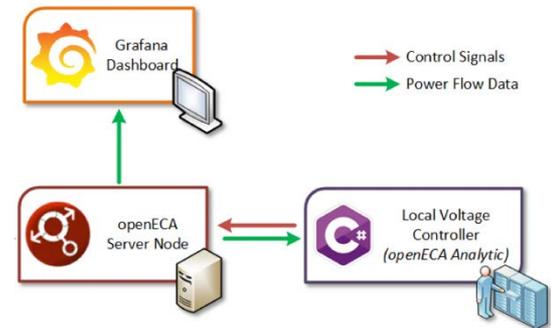

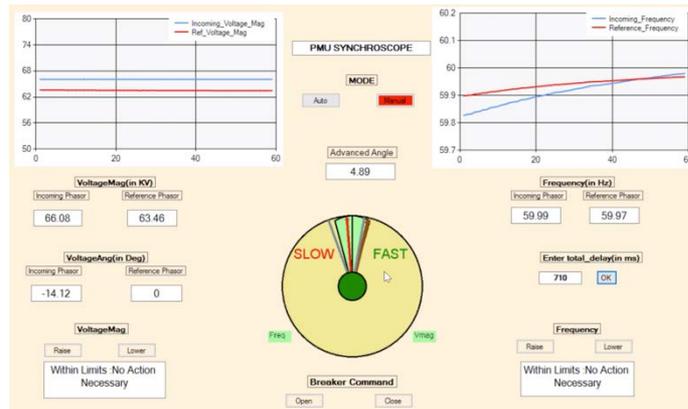

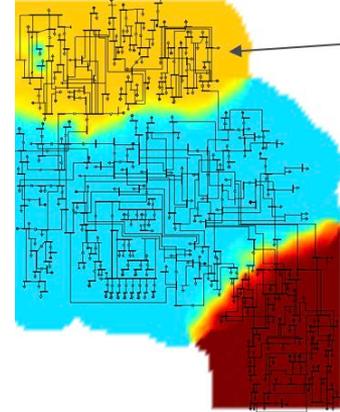

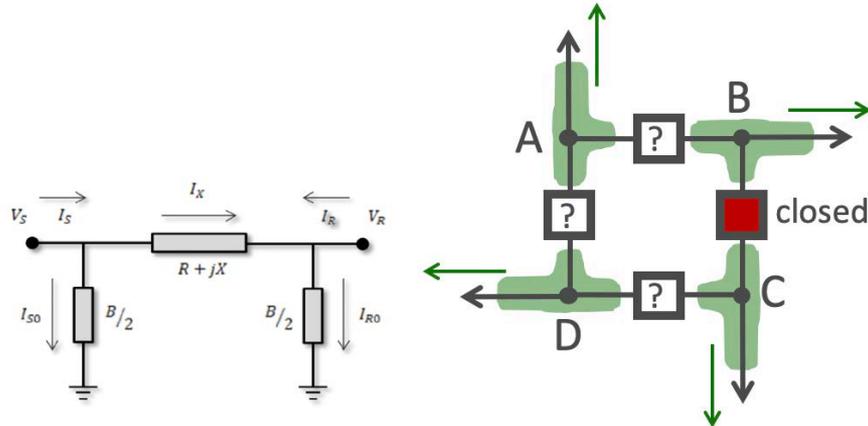

- Develop an open source real-time control and analytics platform based on Grid Solutions Framework
- Develop and test 10 applications with project partners
- Technology improvements to LSE

# openECA

## 7 Network Applications from Dominion + Virginia Tech

- Topology Estimator
- Local Voltage Control
- Regional Voltage Control
- PMU Synchroscope
- Instrument Transformer Calibration
- Transmission Line Impedance Calibration
- Real-Time Impedance Calculator

# openECA

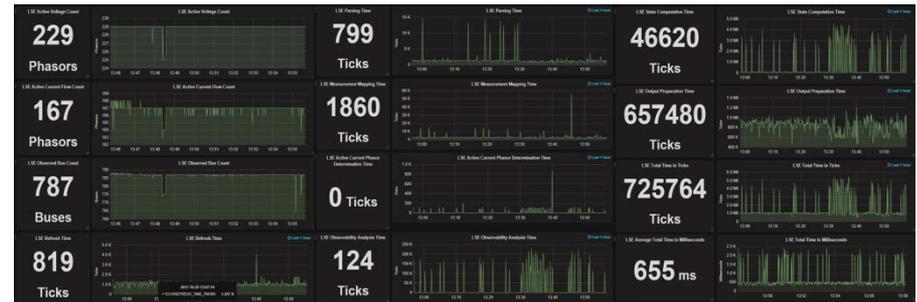

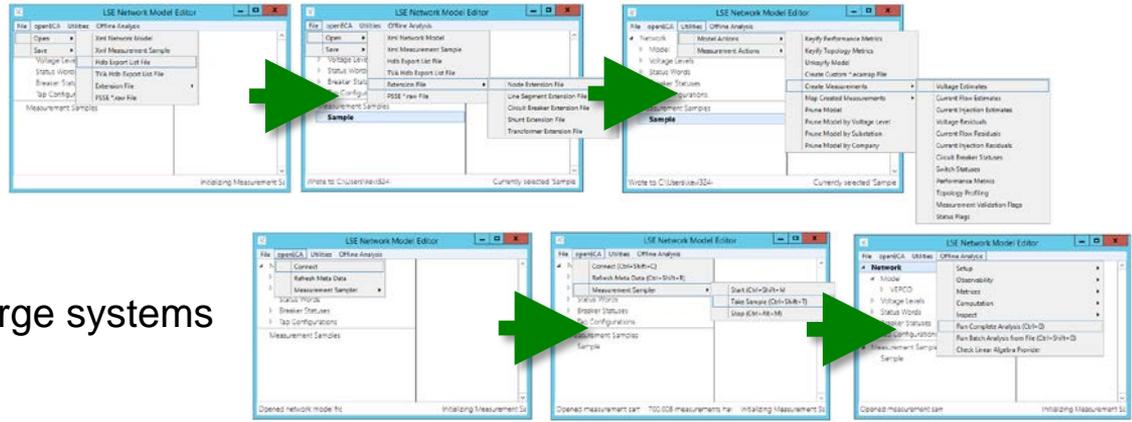

## LSE v2 & the openLSE

### New Features

- Built-in topology estimator
- Built-in-performance metrics
- Performance improvements for large systems
- Modeling automation
- Packaged and installable
- Improved offline analysis
- Integrated with openECA
- LSE Core v2 and openLSE available open source

### Demonstrated at:

- SPP
- TVA
- Dominion Energy

<https://github.com/kdjones/lse>

# DFRs Get PMU Functionality

**2013** – DFR manufactures added PMU functionality as a selling point.

**2014** – Dominion purchases 3 portable DFRs for synchrophasor deployment

**2015** – Lab Testing with many vendors

**2016** – Turning APP recorders on the feature in the field

- 500kV and Power Stations

**2017** – All APP Recorders turned on

**2018** – Upgraded and turned on Emax DFRs

**2019** – USI upgrades

**2020** – Complete Emax and USI upgrades

	Average Per DFR PMU	DFR-PMU EOY 2019 Total
Frequency	1	280
DFDT	1	280
Status	1	280
Voltage Magnitude	16	4,480
Voltage Angle	16	4,480
Current Magnitude	23	6,440
Current Angle	23	6,440
Digital	4	1,120
Analog	0	0
Totals	85	23,800

# PredictiveGrid Deployment

- For storage, visualization, and engineering analysis of bulk historical synchrophasor data
- Proof-of-concept in 2017-2018
- Deployment in AWSGovCloud in 2019
- From contract to live data and platform ready in 3 months
- Super users spread across ET

# PredictiveGrid & Synchrophasor Use Cases

Currently exploring a wide variety of use cases for parameterizing the performance of the transmission grid.

## Detecting Critical Operating Point

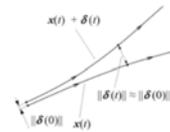

- Approaching critical operating condition (Hopf or saddle node bifurcation), oscillation damping decreases
- Autocorrelation coefficient increases rapidly near critical point, used as a metric

$$\rho(t) = \frac{\sum_{\tau=t-2 \text{ mins}}^t \hat{x}(\tau-1) \times \hat{x}(\tau)}{\sigma^2}$$

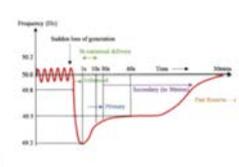

## Transient Stability Detection

- The Lyapunov exponent (LE) is the principal criteria of chaos and represents the growth or decline rate of small perturbation along each main axis of the phase space system.
- Positive value gives loss of synchronism
- Done on voltage phase angle at generator bus

## Estimation of Inertial Response

- Challenges
  - $P_m$  (changes with governor response) is not measured
  - Can give negative inertia values ( $P_m$  positively correlated with  $f$  since  $P_m$  changes)
  - For monitoring we need to estimate from ambient data and not only event data (using a model fit on small variations to estimate response during large disturbances)
- Some approaches –
  - Event based – Assume  $P_m = \text{constant}$ , linear regression  $M \times df = -\Delta P_{me}$
  - Ambient data
    - Large a large signal type dynamic model between  $f$  and  $P_m$
    - Only large changes present are slow variations in equilibrium point

## ZIP Load Model Tuning

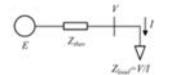

- ZIP load model is widely used for load flow/steady state studies
- Aim is to tune the model parameters online with PMU data
- Linear regression,

$$\begin{bmatrix} P(t_1), \dots, P(t_n) \\ Q(t_1), \dots, Q(t_n) \end{bmatrix} = \begin{bmatrix} a_0^p, a_1^p, a_2^p \\ a_0^q, a_1^q, a_2^q \end{bmatrix} \times \begin{bmatrix} 1, \dots, 1 \\ V^2(t_1), \dots, V^2(t_n) \end{bmatrix}$$

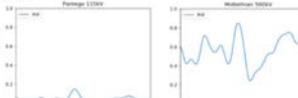

- Challenge is that load is of the form,  $(P, Q)_{scale} \times (a_0 + a_1V + a_2V^2)$
- Where we don't have access to  $(P, Q)_{scale}$  data

## Data-driven Voltage Stability Assessment via Thevenin Equivalent

- Find load margin of each bus
- Equate external system by Thevenin circuit
- Voltage stability index based on maximum power transfer on equivalent system

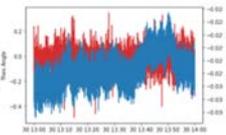

$$Ind = \frac{|Z_{load}| - |Z_{Thev}|}{|Z_{load}|}$$

## Angular Stability Monitoring

- To monitor steady state angular stability (saddle node bifurcation) using local line measurements
- Voltage phase angle difference across line has limited information
- Thevenin voltage phase angle difference has been shown to be a good observer
- Monitoring it and comparing it to normal limits found through historical data or heuristic limits e.g.  $\pm \frac{\pi}{2}$

# Investing in Collaboration

# Value of Industry Collaboration

# Investing in Student Internships & Recruitment

# Graduate Student Internship Program

- Dominion hires graduate student interns each summer to work on challenging and exciting projects.
- Dozens have come in through the program, many are now full time engineers at Dominion
- The program has been active for over 10 years
- Currently we take ~10 students across all of T&D
- Applications for next summer are still up and available on the Dominion Careers website

# WHERE DO WE GO FROM HERE?

# Next Steps for Synchrophasors in the SOC

- Experiment with contemporary vendor tools and technologies for
  - Real-time visualization
  - Situational awareness
  - Resiliency
- Develop compliant data systems to support operator decisions
- Reliability Engineering Operator training

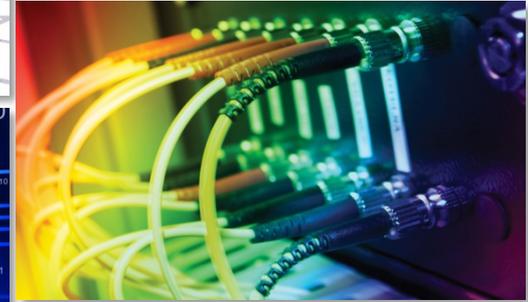

# Next Steps for Synchrophasors in Big Data Analytics

- Explore various ways to parameterize the performance of the grid
- Develop robust engineering KPIs
- Scale engineering metrics geographically and historically
- Create feedback loops into the business

# Next Steps for Synchrophasors in Closed-Loop Control

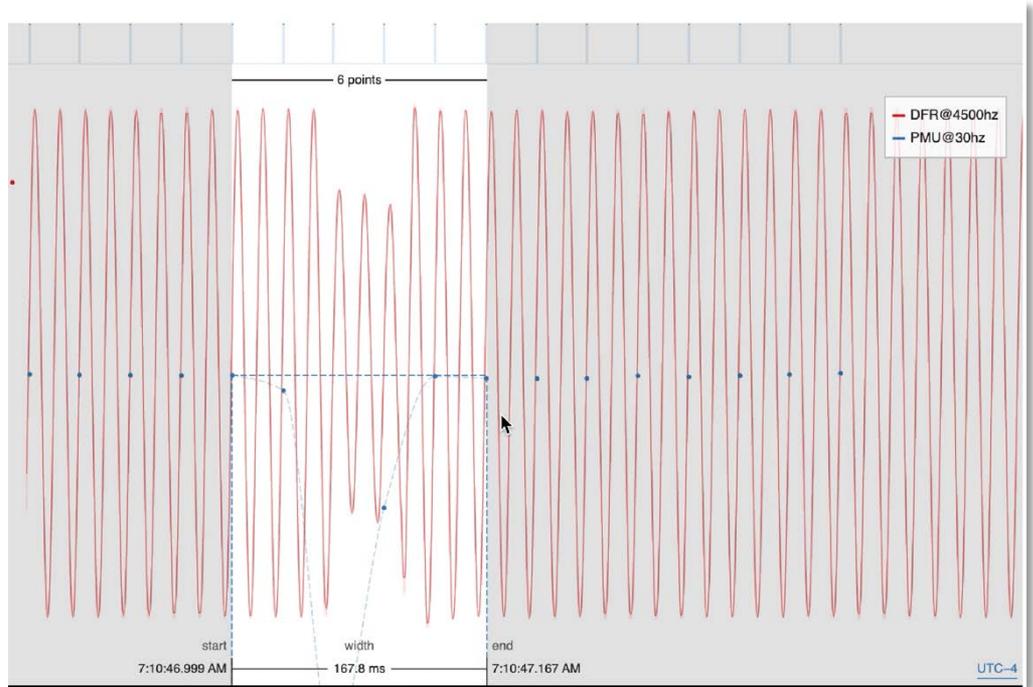

- Wide-Area Closed Loop Control?
- Cyber security
- Communication
- Exploring IEC 61850

# Next Steps for PMU & POW Sensor Deployment

## More data to come...

- Distribution PMU Deployment?
- 5G communication networks?
- Waveform Monitoring?
- Other sensor types?
- Bringing it all together with data fusion

# What Does the Future Hold for the Industry?

**Thank you!**
