Time-Synched Measures Training Update

2021: TRS and PNNL to finish developing *Time-Synchronized Measurements Simulation Training* course and create a “train-the-trainer” video for interested parties. (Still in progress)

*I spoke w/ the lab this week and we're going to push the training out due to changes in personnel and the need to engage a few more team members to finalize the product. We had initially hoped to have the training ready by Sept./Oct. but have encountered delays. I should have a new estimated time of completion by next month's call. Mike C.

In the queue

- Still on track to host a panel session NASPI Spring 2022 on the use of synchrophasor / synchronized measurement data to support real time operations
- Development of system inertia monitoring use case document (It's been on the list for months. Anyone have any ideas how to jump start it?)
- Will continue to have a placeholder for training updates from Mike Cassiadoro and others as information becomes available
- Looking at bringing in presentations on real time (and other) uses of the data. Would that be of value?

Open Mic

- Anything we should be doing with the task team?
- How do we help show the value of the technology to others and to our own Operations personnel?
